A molecular-imprint nanosensor for ultrasensitive detection of proteins

A systematic approach to identify functional motifs within vertebrate developmental enhancers

The effect of *Plasmodium falciparum* Sir2a histone deacetylase on clonal and longitudinal variation in expression of the var family of virulence genes

COMIT: Identification of noncoding motifs under selection in coding sequences
*Genome Biology*, 10 (11), art. no. R133, 2009.

Weak preservation of local neutral substitution rates across mammalian genomes
*BMC Evolutionary Biology*, 9 (1), art. no. 89, 2009.

Cardiolipin and electron transport chain abnormalities in mouse brain tumor mitochondria: Lipidomic evidence supporting the Warburg theory of cancer

cneViewer: A database of conserved non-coding elements for studies of tissue-specific gene regulation

Brain mitochondrial lipid abnormalities in mice susceptible to spontaneous gliomas

Measuring the prevalence of regional mutation rates: An analysis of silent substitutions in mammals, fungi, and insects
*BMC Evolutionary Biology*, 8 (1), art. no. 186, 2008.

Lipidomic analysis and electron transport chain activities in C57BL/6J mouse brain mitochondria

Sequences conserved by selection across mouse and human malaria species

Similarity of synonymous substitution rates across mammalian genomes

Genome-wide regulatory complexity in yeast promoters: Separation of functionally conserved and neutral sequence
