A method for identifying alternative or cryptic donor splice sites within gene and mRNA sequences. Comparisons among sequences from vertebrates, echinoderms and other groups.

Sim4cc: A cross-species spliced alignment program
*Nucleic Acids Research*, 37 (11), art. no. e80, 2009.

A whole-genome assembly of the domestic cow, Bos taurus

Novel Splice Variants of sFlt1 are Upregulated in Preeclampsia

Effective cluster-based seed design for cross-species sequence comparisons

Universal seeds for cDNA-to-genome comparison
*BMC Bioinformatics*, 9, art. no. 36, 2008.

Designing sensitive and specific spaced seeds for cross-species mRNA-to-genome alignment

Improving gene annotation using peptide mass spectrometry

Bioinformatics of alternative splicing and its regulation

List of lists-annotated (LOLA): A database for annotation and comparison of published microarray gene lists

Differences in gene content between Salmonella enterica serovar enteritidis isolates and comparison to closely related serovars gallinarum and Dublin

Finding anchors for genomic sequence comparison

Gene and alternative splicing annotation with AIR
